

INNOVATIVE TECHNOLOGY & SUSTAINABLE INFRASTRUCTURE

The Innovative Technology & Sustainable Infrastructure Pipeline focuses on issues ranging from scientific advances and information access to resiliency and preparedness. Concordia Members in this Working Group address challenges from urban revitalization and smart city development to universal access to information and communication technologies both in the United States and abroad. Collaborative Advisors and Partners are working together to identify opportunities to improve water infrastructure and security through innovative financing mechanisms, to promote inclusive growth through financial digitization, and to utilize technological advances in innovative applications across industries.
